# Information Extraction (Problem)

- Let's have a text describing an acquisition event.

FIRST WISCONSIN <FWB> TO BUY MINNESOTA BANK

MILWAUKEE, Wis., March 26 – **First Wisconsin Corp** said it plans to acquire **Shelard Bancshares Inc** for about 25 mln dlrs in cash, its first acquisition of a Minnesota –based **bank** .

**First Wisconsin** said **Shelard** is the holding company for two banks with total assets of 168 mln dlrs.

**First Wisconsin** , which had assets at yearend of 7.1 billion dlrs, said the **Shelard** purchase price is about 12 times the 1986 earnings of the bank.

It said the two **Shelard** banks have a total of five offices in the Minneapolis–St. Paul area.

Reuter

- What was the object of the acquisition?
- Who was the buyer?
- What was the deal amount?

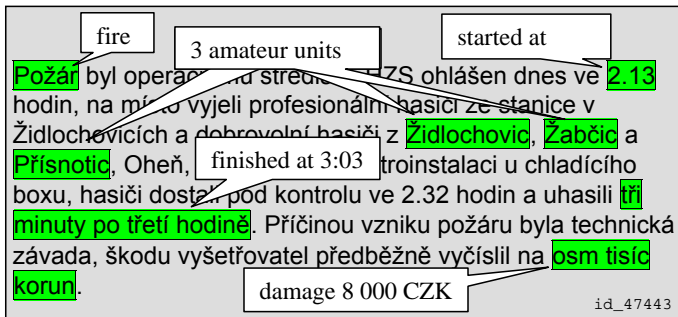

# Information Extraction (Solution)

- Information Extraction tools can identify and extract such information.

<p>FIRST WISCONSIN &lt;FWB&gt; TO BUY MINNESOTA BANK</p> <p>MILWAUKEE, Wis., March 26 - First Wisconsin Corp said it plans to acquire Shelard Bancshares Inc for about 25 mln dlrs in cash, its first acquisition of a Minnesota-based bank.</p> <p>First Wisconsin said Shelard is the holding company for two banks with total assets of 168 mln dlrs.</p> <p>First Wisconsin, which had assets at yearend of 7.1 billion dlrs, said the Shelard purchase price is about 12 times the 1986 earnings of the bank.</p> <p>It said the two Shelard banks have a total of five offices in the Minneapolis-St. Paul area.</p> <p>Reuter</p>	<ul style="list-style-type: none"><li><input checked="" type="checkbox"/> acqabr</li><li><input checked="" type="checkbox"/> acqbus</li><li><input checked="" type="checkbox"/> acqloc</li><li><input checked="" type="checkbox"/> acquired</li><li><input checked="" type="checkbox"/> dlramt</li><li><input type="checkbox"/> doc</li><li><input checked="" type="checkbox"/> purchabr</li><li><input checked="" type="checkbox"/> purchaser</li><li><input checked="" type="checkbox"/> purchcode</li></ul>

- Review 1 (Filip Železný)
- Review 2 (Diana Maynard)

# Inductive Logic Programming

- Learning examples  $E = P \cup N$  (Positive and Negative)
  - E.g. relevant and irrelevant pieces of text w.r.t. particular extraction task
- Background knowledge  $B$ 
  - E.g. linguistic structure connecting individual words
- ILP task: To find logical program or hypothesis  $H$  such that all positive examples are covered and none negative

$$(\forall e \in P)(B \cup H \models e) \ \& \ (\forall n \in N)(B \cup H \not\models n).$$

- E.g. to find common pattern (in the linguistic structure) present around every relevant piece of text and none irrelevant.

15.05.2007

**V trabantu zemřeli dva lidé**  
K tragické nehodě dnes odpoledne hasiči vyjžděli na silnici z obce Česká do Kutim na Brněnsku.

Nehoda byla operativně střediskem IZS ohlášena ve 13.13 hodin. Na místě zasahovala jednotka profesionálních hasičů ze stanice Brněnské. Jednalo se o čelní srážku autobusu jedoucí ve směru do Kutim. Podle dostupných informací trabant jedoucí ve směru do Kutim náhle vyjel do protisměru, kde narazil do linkového autobusu dopravní společnosti ze Žďaru nad Sázavou. Ve zdemolovaném trabantu nalezli zemřeli dva muži – 82letý senior a další muž, jehož totožnost zatím není známa.

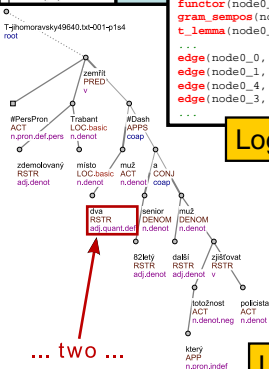

Hasiči začali na vozidle protipožární opatření a po vyšetření z dokumentování nehody dopravci policii vrak trabantu zaklesnutý pod autobusem pomocí lana odtrhli. Po odstranění střechy trabantu pak hasiči vyprosilí těla obou mužů. Obě vozidla – trabant i autobus, se dostupně odstranili na kraj vozovky a uvolnili tak jeden jízdní pruh. Úhrn provozních kapalin nebyl zjištěn. Po 16. hodině pomohli vrak trabantu odtrhnout k odstavu a asistovali při odtažení autobusu. Po úklidu vozovky trabant rveš 16.30 hodin místo nehody otevřeli policijním a ukončili záležitost.

# Extraction Ontology

- The knowledge (extraction model) used in the extraction process can itself be saved in an ontology.
  - So called Extraction Ontology
- D. W. Embley, "Toward semantic understanding: an approach based on **information extraction ontologies**," in *ADC '04*. Darlington: ACS, 2004, pp. 3--12.
- M. Labský et al., "The Ex Project: Web Information Extraction Using **Extraction Ontologies**," in *Knowledge Discovery Enhanced with Semantic and Social Information*, ser. Studies in Comput. Intellig. Springer, 2009, vol. 220, pp. 71--88.
- But these Extraction Ontologies can only be used with the original tool.
- They are not shareable!

# Extraction Rules Interpreted by OWL Reasoner

- Tool **independent** extraction ontologies

# Extraction rules in OWL/XML syntax for Rules

```
<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE Ontology [
  <!ENTITY pml "http://ufal.mff.cuni.cz/pdt/pml/" >

- Inductive Logic Programming
- Organization of this Presentation

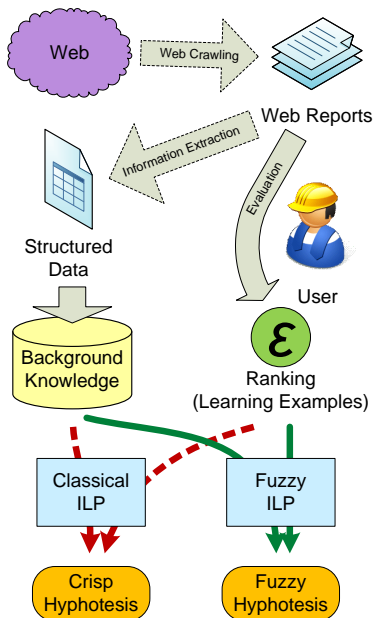

## 2 Contents

- Manual Design of Extraction Rules
- Induction of Extraction Rules
- Shareable Extraction Ontologies
- **Fuzzy ILP Document Classification**

## 3 Questions and Comments from Reviews

- Review 1 (Filip Železný)
- Review 2 (Diana Maynard)

# Schema of the whole system

- ① Web Crawling
- ② Information Extraction and User Evaluation
  - Construction of **background knowledge**
  - Construction of **learning examples**
- ③ Logic representation
  - Crisp
  - Fuzzy
- ④ ILP Learning
  - Crisp
  - Fuzzy
- ⑤ Comparison of results

# Essential difference between learning examples

## Crisp learning examples

```
serious_2(id_47443). %positive
```

```
serious_0(id_47443). %negative
```

```
serious_1(id_47443). %negative
```

```
serious_3(id_47443). %negative
```

## Monotonized learning examples

```
serious_atl_0(id_47443). %positive
```

```
serious_atl_1(id_47443). %positive
```

```
serious_atl_2(id_47443). %positive
```

```
serious_atl_3(id_47443). %negative
```

- For one evidence (occurrence, e.g. one accident)
- Crisp:  
Always **one** positive and **three** negative learning examples
- Monotonized:  
**Up to the observed degree** positive, the rest negative.

# Monotonization of attributes

```
damage_atl ← damage
```

```
damage_atl(ID,N) :- damage(ID,N), not(integer(N)). %unknown values
```

```
damage_atl(ID,N) :- damage(ID,N2), integer(N2), %numeric values  
                    damage(N, integer(N), N2>=N.
```

- We infer all lower values as sufficient.
- Treatment of unknown values.
- Negation as failure.

# Rules for the whole Czech fireman dataset

*% Crisp*

```
serious_0(A) :- fatalities(A,0), injuries(A,0), cars(A,1),
               amateur_units(A,0), lather(A,0).
serious_0(A) :- fatalities(A,0), cars(A,0), amateur_units(A,0),
               professional_units(A,1).
serious_1(A) :- amateur_units(A,1).
serious_1(A) :- damage(A,300000).
serious_1(A) :- type(A,fire), amateur_units(A,0), pipes(A,2).
serious_1(A) :- type(A,car_accident), dur_minutes(A,unknown),
               fatalities(A,0), injuries(A,1).
serious_2(A) :- lather(A,unknown).
serious_2(A) :- cars(A,0), lather(A,0), aqualung(A,1), fan(A,0).
serious_2(A) :- amateur_units(A,2).
serious_3(A) :- fatalities(A,2).
serious_3(A) :- type(A,fire), dur_minutes(A,unknown), cars(A,0), fan(A,0).
serious_3(A) :- injuries(A,2), cars(A,2).
serious_3(A) :- fatalities(A,1).
```

*% Monotonized*

```
serious_atl_0(A).
serious_atl_1(A) :- injuries_atl(A,1).
serious_atl_1(A) :- dur_minutes_atl(A,21), pipes_atl(A,1), aqualung_atl(A,0).
serious_atl_1(A) :- damage_atl(A,8000), amateur_units_atl(A,3).
serious_atl_1(A) :- dur_minutes_atl(A,197).
serious_atl_1(A) :- dur_minutes_atl(A,unknown).
serious_atl_2(A) :- dur_minutes_atl(A,50), pipes_atl(A,3).
serious_atl_2(A) :- size_atl(A,1364), injuries_atl(A,1).
serious_atl_2(A) :- fatalities_atl(A,1).

# Evaluation -- Czech fireman dataset

# The impact of dataset size on classification performance

- 'nursery' dataset from UCI ML Repository
- x-axis: number of training instances
- y-axis: percent of correctly classified instances
- average values from 10 repetitions

- 1 Introduction
  - Information Extraction
  - Deep Language Parsing
  - Inductive Logic Programming
  - Organization of this Presentation
- 2 Contents
  - Manual Design of Extraction Rules
  - Induction of Extraction Rules
  - Shareable Extraction Ontologies
  - Fuzzy ILP Document Classification
- 3 Questions and Comments from Reviews
  - Review 1 (Filip Železný)
  - Review 2 (Diana Maynard)

# The Title

- Nobody is happy with the title!
  - Including the author himself ...
- But it is quite difficult to find better one.
- "Use of deep language parsing for generation of extraction rules"
  - The last two topics are not covered
- "How ILP and ontologies can help information extraction"
  - The first and the last topic is not covered

- 1 Introduction
  - Information Extraction
  - Deep Language Parsing
  - Inductive Logic Programming
  - Organization of this Presentation
- 2 Contents
  - Manual Design of Extraction Rules
  - Induction of Extraction Rules
  - Shareable Extraction Ontologies
  - Fuzzy ILP Document Classification
- 3 Questions and Comments from Reviews
  - Review 1 (Filip Železný)
  - Review 2 (Diana Maynard)

## 1 Introduction

- Information Extraction
- Deep Language Parsing
- Inductive Logic Programming
- Organization of this Presentation

## 2 Contents

- Manual Design of Extraction Rules
- Induction of Extraction Rules
- Shareable Extraction Ontologies
- Fuzzy ILP Document Classification

## 3 Questions and Comments from Reviews

- Review 1 (Filip Železný)
- Review 2 (Diana Maynard)

# The Task of Information Extraction

- Is it really necessary to discuss all these topics?
  - Are we presenting our work or creating a ``text book"?
- What reference is actually missing?
- Is the used terminology lacking something important?

Dědek	MUC-6 1995, Appelt & Israel 1999
<i>Entity Recognition</i>	Named Entity Recognition
Relation Extraction	Template Element Construction
Event Extraction	Template Relation Construction
<b>Event Extr. Encoded as Ent. Rec.</b>	Template Unification
Instance Resolution	Scenario Template Production

# Future Experimenting Possibilities

# Available Resources Criterion: Time, Effort, Allocated Capabilities

- One common answer to comments like:
  - "Chapter, section, etc. is too short."
  - "Problem, solution, etc. should be more discussed."
  - "The techniques could easily be described and motivated in much more detail."
  - "More examples should be given."
  - "Evaluation dataset is rather too small."
- The answer is:
  - Yes, that is reasonable comment, but there were no more available resources for it.
  - Is the work as a whole too short?
  - Are there parts that should have been omitted?
  - We did our best to include the most important and relevant things.
  - But then, oops, the time was up!
- Let's look at this in more detail on the next slides...

# Work Performed -- Implementation

- Nontrivial extensive implementation
- Use and integration of following tools and technologies:
  - Linguistics
    - PDT 2.0 analysis tools + TectoAnalysis by Václav Klimeš
    - TectoMT (Treex currently also supported)
    - Perl/brted programming of first *procedural* extraction rules
    - Netgraph by Jiří Mírovský, *declarative* extraction rules
    - GATE
  - Semantic Web
    - OWL API + Pellet, HermiT and FaCT++
    - Jena (including Jena Rules)
    - SweetRules
    - PML → RDF (OWL) transformation (XSLT  $\approx$  GRDDL)
    - ILP Extraction rules → SWRL transformation
  - Data Mining
    - **ILP** (Progol, Prolog + Aleph):  
Integration with GATE (IE Rules Induction) and Weka (Fuzzy ILP Classifier)
    - **Weka**: Fuzzy ILP Classifier and Statistical significance of GATE experiments
  - XML RPC (Perl server, Java client)

# Work Performed -- Other

- Construction (or contribution) of new datasets:
  - Czech Fireman Reports without Annotations
  - Czech Fireman Reports Manually Annotated
  - RDF Dataset Based on Czech Fireman Reports
  - RDF Dataset Based on Corporate Acquisition Events
  - Classification Dataset Based on Czech Fireman Reports
- Evaluation experiments
  - **Direct** comparison with state-of-the-art
- Publications:
  - Including E-Environment and Economics (Crisis prediction)
- Development of the idea of **Web Semantization**
  - Finally not included in the thesis
  - But published in selected papers
